Background

Cloud Computing has revolutionised the way infrastructure is delivered to the business and has enabled enterprise IT solutions to be accessed by the SME. In 2007, following 15 years in the managed services industry, Commensus realised the need to invest in a secure, resilient and scalable cloud computing platform. Our vision was simple, "Given an unlimited budget, what was the most comprehensive IT platform that we could build?" The result was a £1 million investment in the award winning Commensus Virtual Infrastructure Platform (known as C-VIP).

C-VIP Platform Topology

Commensus have achieved ISO 27001 certification since the platform launched, recognising our investment in maintaining the highest data security standards in our industry. Leveraging the power of the Internet, you gain access to a secure, resilient and scalable IT platform that's geographically replicated across our Tier 3+ data centres in Acton, Goswell Road and Docklands.

Additional offshore replication is also available through our facilities in Paris and Frankfurt.

All of our servers are BGP Internet routed and use Tier 1 equipment on Cisco, HP and EMC server architecture. With daily maintenance and monitoring 24/7/365 around the clock, combined with high availability and secondary backup, C-VIP is guaranteed to impress.

For more information about our platform view our online brochure at www.commensus.com/brochure
